

Elevate your awareness

CommandCentral Aware + SkySafe

Augment your real-time awareness with live drone and pilot intelligence

In today's world, threats don't stop at the ground level, adding a critical dimension to real-time visibility for public safety teams. From contraband drops over correctional facilities to reckless intrusions over critical infrastructure, most agencies have been unable to see or respond to what's happening in their skies. Without this visibility, correlating drone intelligence with existing ground-level information is difficult, hindering rapid, unified incident response. Integrating drone detection into CommandCentral Aware closes this gap, creating a single, unified view of operations on the ground and in the air.

Unify aerial & ground intelligence

Visualize active drone flights and drone alert zones directly on your CommandCentral Aware map alongside 9-1-1 calls, CAD incidents, vehicles, radios, cameras and sensors. This single operational pane ensures a complete, correlated understanding of any unfolding event - both on the ground and in the sky.

Get more eyes on threats in the sky

Receive alerts when a drone flies into or breaches a defined alert zone. Alerts are seamlessly integrated into your existing CommandCentral Aware workflow and can be extended to CommandCentral Aware users, enabling rapid assessment and response to aerial threats.

Conduct a comprehensive incident review

Access detected drone and pilot information without leaving CommandCentral Aware. Drill down into past flight details, correlating past drone flights with historical responder locations, CAD incidents and other integrated data to fully understand how an incident unfolded to inform training and after-action reports.

Key features

Detailed drone identification

Identify specific drone models, associated drone operators and drone home points.

Drone affiliation visualization

Visualize drone affiliation (Unknown, Friendly, Neutral, Suspect/Hostile) by color-based icon status.

Enhanced tactical coordination

Utilize the tactical Markups tool in response to live drone threats to quickly draw and share tactical annotations (e.g., command posts, containment zones, safe corridors).

Integrated flight and target views

Seamlessly transition to SkySafe for in-depth live flight details or historical data of a particular drone target.

The integration of SkySafe with CommandCentral Aware provides public safety agencies with unmatched aerial domain awareness. This powerful combination transforms how you monitor, detect and respond to drone activity, enhancing safety and security across your jurisdiction with intelligence you can act on.
