

Wearable Panic Button

Safety at your fingertips

A single button to call for help in an emergency results in a faster response, right where you need it. The Wearable Panic Button uses the trusted technology behind the Rave Panic Button mobile application to instantly alert on-site personnel, first responders and key stakeholders of an emergency.

Integrated with Bluetooth® and LoRaWAN technology, the Wearable Panic Button can pinpoint your precise indoor location, drastically reducing response times. This is particularly valuable in large and complex environments, such as schools, hospitals, hotels and retail stores.

The Wearable Panic Button is discreet to use, does not require extensive training and protects the end user's privacy. Better prepare for emergencies and give your people peace of mind by equipping them with a Wearable Panic Button.

Convenient, accessible form factor

The Wearable Panic Button is small in size and user friendly. Keep the device on a lanyard or store in a desk drawer for quick access.

Advanced location detection

Go beyond general building information. Provide 9-1-1 with granular location details, including the floor, room number and device ID.

Simplicity in critical moments

The device is straightforward to activate. A simple press of the button gets help on the way to your personnel.

Key features

Precise location

Local law enforcement and 9-1-1 receive the precise location of a device activation, down to the room, through the Rave platform. This allows first responders to know exactly where to go in the building, helping reduce response times and increase awareness with zero dependence on GPS signal or strength.

Highly portable

People move around. The Wearable Panic Button can be used all over a facility. Each room is installed with a small wireless Bluetooth beacon. When the Wearable Panic Button is activated, the device picks up the nearest beacon information, wherever you are in the building.

Compliant with union rules and laws

Panic button legislation is growing in popularity, which requires buildings to be equipped with silent panic alarms that directly notify law enforcement. If you or your staff are hesitant to use a Panic Button app on their personal devices, the Wearable Panic Button can help you stay compliant and keep your staff comfortable.

Find your solution

The Wearable Panic Button operates on its own - no need to download an app. Your staff can also mix and match between the Wearable Panic Button or the Rave Panic Button app, depending on their preferences.
