Accountability

CompassReports Features & Benefits

CompassCom Software is introducing our latest reporting software based on SQL Reports. CompassReports is an easy way to get accurate information on fleet or vehicle use and performance allowing managers to enhance safety, empower efficiency and enable accountability.

Drill down into your data: CompassReports allows users to get an overall view of their fleet or to drill down and get individual vehicles performance details.

FEATURES (Standard Reports):

Mileage: Reports mileage driven by selected vehicles or vehicle groups. The report can be filtered for specific inputs (e.g. miles with sirens on or off, miles with plow down).

Speed: Reports average and max speed, duration and location for instances where speed surpassed a preset speed for a certain vehicle or vehicle group. The report can be filtered for specific inputs (e.g. sirens off or on) or for a specific Street Name.

Stop/Idle: Used to determine stop or idle events. Duration and speed are used for the calculations. Running this report with an "Ign On" will produce an idle report.

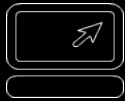

Legend: Shows vehicle groups and colors.   Home: Map view with assets.   Settings: LDE Connections.

MOTOROLA SOLUTIONS   esri

Inputs: Used to determine miles and duration of input events, such as lights on/off, plow up/down, or any other inputs that may be wired on the mobile asset.

Turn: Used to determine the number of left vs right turns for enhanced safety.

Activity: This report is useful to ensure that all the wireless GPS devices are operational or the last time of message.

Snow: Used to summarize material usage and material type for snow events.

Schedule Reports: Allows you to schedule reports to run and be sent to email for any of the above reports.

BENEFITS:

- **After action review of asset performance**
- **On-the-fly, user configurable reports give immediate answers**
- **Custom report development to your requirements**
- **Completely scalable**
- **Export to standard formats (html, CV, Microsoft Excel) for interoperability with other management software**

Minimum System Requirements:

Workstation Configuration	Required	Recommended
Operating System	Windows 7	Windows 10
RAM	4 GB	4GB +
Processor + Speed	2.6 GHz	2.6 GHz +
LAN Speed	10/100mbps	10/100mbps
Monitor Resolution	1280 x 1024	1280 x 1024 +
Internet Browser	Internet Explorer 10 +, Chrome, Firefox	Chrome or Firefox
Mapping	Access to internet for base maps	ArcGIS Server for base maps

Total Insight and Total Control Empowering Real-Time Decisions
